EPS Corporation and Osprey Technology Solutions, Inc. enter into a formal GSA Mentor-Protégé Program

Tinton Falls, NJ -- EPS Corporation recently was accepted into the U.S. General Services Administration (GSA) Mentor-Protégé Program as a Mentor to the New Jersey based Protégé firm, Osprey Technology Solutions, Inc. (Osprey TSI). Under the program, EPS will mentor Osprey TSI in several areas of their business to assist them in acquiring more U.S. Government prime and subcontract awards, and create successful business operational processes to foster future success.

The Mentor-Protégé Program, sponsored by GSA's Office of Small Business Utilization, encourages the pairing of GSA prime contractors with smaller companies, including disadvantaged, women-owned, historically underutilized business zoned, veteran-owned, and service-disabled veteran-owned small businesses. In so doing, GSA promotes the business development of small businesses and enhances their capability to compete more successfully for federal government contracts and gain access to economic opportunities.

"We are honored that the GSA has selected us for this special program with Osprey TSI, which is an outstanding company with which we have previously worked with great success," said John Gagliano, Senior Vice President, Chief Operating Officer and General Counsel of EPS Corporation. "We welcome the opportunity to help Osprey TSI continue to grow and succeed for our government."

"Osprey TSI is looking forward to working closely and collaborating with EPS in the GSA Mentor Protégé program," said Yenifer LaBruzzo, CEO of Osprey TSI. "EPS and the principals of Osprey TSI have a long and successful history. They are a firm for which we have so much respect and with which we have a shared mission. We look forward to mutual success in this program."

About EPS Corporation

Founded in 1983, EPS Corporation is a Service Disabled Veteran Owned Small Business. The company provides the Department of Defense, Federal Agencies and commercial clients with system integration, project management, logistics support, fielding and training services, engineering, voice, video, data networks and security systems, marine services and installation of alternative energy systems.
